Child Psychology Arun Kumar, 2000-01-01 There Are Two Major Approaches To The Study Of The Child. One School Of Thought Is Concerned Primarily With The Factors In Development That Can Be Measured Objectively; The Other Focuses

Primarily On The Subjective Aspects Of The Child S Experience. The Psychologist Who Uses The Objective Point Of View In His Research Is Primarily Concerned With Quantitative Measurements Of Physical Growth, The Development Of Ability, And Other Such Data. The Psychologist Who Identifies With The Subjective Point Of View Is Mainly Concerned With The Child S Perceptions And Feelings In Other Words, With The Aspect Of The Child Referred To As The Self. Psychologists Might Also Be Divided On The Basis Of Their Allegiance To Nomothetic Laws Those That Are Generally Applicable To All Children Or Idiographic Laws Those That Apply To The Child As An Individual. The Present Work Encompasses Encyclopedic And Empirical Information On All Aspects Of Child Psychology And Child Development. Substantially Based On The Findings Of Eminent Scholars In The Field, This Book Will Prove A Dependable Reference Tool To All The Concerned.

Anxiety in Children Ved P. Varma, 2015-09-25 Throughout the world – and particularly in developed countries – anxiety is one of the problems of modern living. It is not only adults who experience this problem, indeed, anxiety is often evident during periods of rapid change and since childhood is the period during which we develop most rapidly, then a strong case can be made for anxiety being especially prevalent in children. Originally published in 1984, *Anxiety in Children* gives a broad discussion, by well-known experts, of the issues of anxiety in children, focusing particularly on what those involved in mental health, paediatrics and educational and clinical psychology, can do to help. This book will still be of interest to all such professionals.
